

Customer Success Stories - Stronger Together + Security in Depth

Federal Government

INFOSERV360° delivered & implemented a Network Access Control (NAC) solution using HPE Aruba ClearPass Policy Manager (CPPM), integrated seamlessly within the customer's IT and network landscape. The solution was initially deployed to manage 5,000 endpoints in Phase 1, then scaled to 12,500 in Phase 2 with future plans to scale up to 20,000 in the future.

This large-scale implementation requires deep integration with multiple third-party systems, including H3C, Huawei, and other existing components across the customer's environment.
